Java Backend Developer focused on REST APIs and microservices with Spring Boot, Spring Security and SQL databases. Hands-on experience through a co-founded software studio, freelance work and collaborative projects, including backend development, Docker deployment and React integration.

Experience

Freelance Remote
Web Developer | Full Stack June 2025 – Present
- Built and deployed on Hostinger a React product catalog for a small-business client, including a WhatsApp-based order flow; handled requirements, delivery and ongoing maintenance.

Atomicat-Tech Remote
Co-Founder & Backend Developer Aug 2024 – May 2025
- Designed and implemented backend services, database entities, and API integrations for multiple client projects using Java and Spring Boot.
- Implemented the security module for an e-commerce application using Spring Security and JWT authentication.

No Country | Professional Practice Remote
Backend Developer Mar 2024 – Apr 2024
- Developed the complete backend module for the Receptionist role using Java and Spring Boot, implementing the Controller, Service, Repository, and Entity layers.
- Implemented DTOs and database persistence using Spring Data JPA and MySQL, collaborating with the development team through Git, Jira, Sprint Planning, and individual branches.

Education

Programming Technician - *Universidad Tecnológica Nacional* (2024 –Present) - *Mar del Plata, AR*
Full Stack developer - *Mar del Plata Programa* (2023) - *Mar del Plata, AR*
Web Programming - *Oracle Next Education/ Alura Latam (2022) - Mar del Plata, AR*

Projects

Order MGMT — Backend / Microservices Project
Personal Project

- Developed REST APIs for managing users, products and orders, integrating the order and product services through OpenFeign to retrieve orders with their associated product details.
- Built independent Spring Boot services with MongoDB, MySQL and PostgreSQL, using a reactive API gateway with Spring Cloud Gateway and WebFlux, Eureka for service discovery, and Config Server for centralized configuration.
- Implemented JWT authentication with Spring Security, containerized the services using Docker Compose, and added service and controller tests with JUnit 5, Mockito and MockMvc.

Propiedades 360 — **Full Stack / Backend Project**
Collaborative project — completed independently

- Took over and refactored a collaborative real estate application, separating business logic from controllers and implementing user registration, login and property viewing scheduling.
- Implemented JWT authentication with Spring Security, added global exception handling, and wrote backend tests.
- Containerized the Spring Boot backend with Docker and deployed it on Render, with the React frontend on Vercel and PostgreSQL hosted on Supabase.

Skills

Programming languages: Java, JavaScript, TypeScript
Backend: Spring Boot, Spring MVC, Spring WebFlux, Spring Security, JWT, REST APIs
Architecture & Cloud: Microservices, Hexagonal Architecture, API Gateway, Service Discovery (Eureka), Config Server, OpenFeign
Persistence & Databases: MySQL, PostgreSQL, MongoDB, JPA, Hibernate
DevOps & Testing: Docker, Docker Compose, Maven, Git, JUnit 5, Mockito, MockMvc
Frontend: React, Vite, Tailwind CSS, HTML, CSS
Tools & Methodologies: IntelliJ IDEA, VS Code, Postman, Jira, Scrum/Agile/Kanban
Languages: Spanish (Native), English (B2)
